

# Vertical Planter Hanging and Planting Instructions

Items Needed: Vertical Planter, drill, level, potting soil, and herbs.

**Hanging Instructions:** Each Vertical planter comes with a very easy to hang bracket with two screws. Several planters can be hung together (I did four) with about an inch in between each bracket. Each planter mold has a groove on the back that allows it to sit securely on the bracket.

**Planting Instructions:** Lay planter flat and arrange each herb into the desired cell and fill gaps with potting soil. Water thoroughly and then prop planter up at about 45 degrees and allow plants to establish for 2-4 days. Allowing planter to sit before hanging on wall reduces the amount of dirt or plants falling out of cells.
